

VACUUM SWEEPERS

For sweeping lawns, roads and large floors

SANTONI FS-1200 is family of vacuum floor sweepers which are ideally suited for the cleaning of large areas - such as lawns, roads inside factories, large godowns/warehouses, public places, exhibition grounds, etc.

With a suction nozzle of 750 mm (30 inches) width it can cover up to 30000 sq.ft per hour.

SANTONI FS-1200 is available in four versions:

FS-1200P - 3 hp, 3-phase, motor run

FS-1200K - run by "petrol start kerosine run engine from Honda. This engine is "recoil rope" start.

FS-1200D - Lumbardini (from Greaves) compact diesel engine run. This model is push button start.

FS-1200B - Battery run.

FS-1200 is mounted on large inflated wheels which make its movement very easy.

The nozzle in front has soft lips due to which it can suck from hard floors as well as soft surfaces like grass lawns and Golf courses. It guzzles cut grass, leaves, light items such as cigarette butts, paper clippings, etc.

The dust is collected in a very large filter bag from where it can be disposed-off conveniently.

A very special feature of this machine is facility to attach a hose and extension wand - either to pick large volumes of light wastes (a heap of leaves) or to clean in nooks and corners. A special valve over the main nozzle can be rotated to shift the suction from the nozzle to the suction hose.
